AUTHOR: Speranskiy, G. M., Hero of Socialist Labor, Active Member of the Academy of Medical Sciences USSR

TITLE: Successes of Soviet Pediatrics (Uspekhi Sovetskoy pediatrii)

PERIODICAL: Nauka i zhizn', 1958, Nr 11, pp 11-12 (USSR)

ABSTRACT: Prior to the advent of communism, infant mortality was very high in the USSR - every third baby died during the first 12 months of life. In 1922, the Tsentral'nyy institut okhrany materinstva i mladenchestva (the Central Institute for the **Mother and Infant Protection**) was founded in Moscow. This Institute was subsequently renamed the Scientific Research Institute of Pediatrics, of the USSR Academy of Sciences. The author reviews the various diseases which endangered the lives of juveniles, and the progress made in fighting infant mortality by applying modern hygiene and therapeutics. The oldest scourge of childhood - contagious diseases - will soon

28(1)125(1) PHASE I BOOK EXPLOITATION SOV/2831

Mekhanizatsiya i avtomatizatsiya trudoymekhnicheskikh protsessov v litseynom proizvodstve (Mechanization and Automation of Labor-consuming Processes in Foundry Practice) Moscow, Mashgiz, 1959. 226 p. Errata slip inserted. 4,000 copies printed.

Reviewer: K. N. Stobnikov, Candidate of Technical Sciences, Ed. (title page); G. I. Kobylitskiy (book); A. M. Sokolov, Candidate of Technical Sciences, Ed. (book); G. V. Spasskiy, Mashgiz Ed. for Literature on the Technology of Machinery Manufacture (Leningrad Division, Mashgiz); Ye. P. Kuznetsov, Engineer.

PURPOSE: The book is intended for technical personnel in foundries and engineers engaged in the mechanization and automation of industrial processes. It may also be used by students of institutions of higher technical education.

COVERAGE: The book deals with recent achievements in the mechanization and automation of time- and labor-consuming operations in foundries. Specific instances of mechanization and automation of foundry processes are described. The material presented in this book is divided into six parts, dealing with the following subjects: molding materials, mold and coremaking, casting, sheetrock of molds, finishing of castings, and mechanical treatment of castings. The application of technical automation is presented by several authors. The application of automation ranges from the preparation of molds and cores to the mechanization and streamlining of specialized casting methods, such as investment casting and the use of shell molds. There are numerous diagrams showing automated and mechanized installations in foundries. Most of the material is based on experiments and work done at the "Krasnyy Alkay" Plant. Some of the methods described appear to be in the experimental stage at that plant. The technical papers published in this book were originally presented at a technical conference of the Soviet machine industry in October, 1957. No personalities are mentioned.

TITLE:

Study of the upper layers of the atmosphere with the  
aid of meteorological rockets

PERIODICAL:

Referativnyy zhurnal, Geofizika, no. 3, 1963, 20,  
abstract 3.166 (Tr. Vses. nauchn. Meteorol. sovesh-  
chaniya. T.I.L., Gidrometeoizdat, 1962, 91-103)

TEXT:

In the present review-type article the authors give  
the results of studies carried out at Tsentralnaya aerologicheskaya  
observatoriya (Central Aerological Observatory) on atmospheric sound-  
ing with meteorological rockets. Measuring methods are described and  
the main points are given for obtaining such atmospheric character-

istics as pressure, temperature, and wind. Certain results are given: data of seasonal temperature variations at heights up to 50 km in the middle latitudes of the USSR and in polar regions, cases of sudden warming up, characterization of temperature distribution curves, a table characterizing the temperature inversion below the stratopause under the conditions of polar night, and data regarding the circulation in the upper atmospheric layers. Information is given on the constructed meridional sections of temperature fields and on the zonal component of the gradient wind. (25 references).

AUTHOR: Speranskiy, M.A.

TITLE: Utilize Fully and Correctly the Results of Electric Core Sampling in the Estimation of Prospected Coal Reserves.

PERIODICAL: Razvedka i okhrana nedr, 1959, Nr 4, pp 11-15 (USSR)

ABSTRACT: The following methods of electric core sampling of coal-beds at present are applied in the Soviet coal industry: the method of apparent resistances (KS); of natural potentials (PS); of the gradient of natural potentials gradient PS; of induced potentials (VP); the methods of bridge (MK) and of "current" (tokovyy) core samplings (TK), and the method of slide contacts (MSK). Methods of radio-active core samplings are as follows: of gamma-core sampling (GK), gamma-gamma-core sampling (GGK) and the method of neutron gamma core sampling. The most widely used method is that of gamma-gamma core sampling, applied since 1955 in the Urals. Samples of coal are extracted

in the Estimation of Prospected Coal Reserves.

by "side shooting" (bokovyye strelyayushchiye) core lifters (gruntonosy) (GBS) of different types. The complex of the geophysical researches consists of two stages: a general prospecting stage and a detailed prospecting stage. The first stage is used for the exposure of the coal bed and for the lithologic division of the cross section, the second - for the exact definition of the importance of beds and their structure. The application of one of the methods depends on geological conditions and quality of coal. From that point of view the author divides all Soviet coalfields into 4 groups. 1) The deposits formed from coals of PS-G, and partly of T, D, and B marks which have a higher specific electric resistance than other rocks composing the cross sections. For general prospecting, the (KS) method is recommended, for detailed prospecting - the (TK) method. The

**Utilize Fully and Correctly the Results of Electric Core Sampling in the Estimation of Prospected Coal Reserves.**

following deposits belong to this group: The Donbass, Kuzbass, Pechora, Karaganda, L'vov-Volyn', Suchan, Sakhalin and others. 2) Deposits of usual or brown coals of high or increased specific resistance containing in the cross-sections a large number of rock varieties and with a bad correlation of coal beds. Radioactive methods of core sampling (GK), (GGK) and (NGK) must be used in this case. To obtain more reliable data, the author recommends the additional use of usual electric sampling methods - (TK) and (KS) for detailed prospecting. The following deposits belong to this group: the Kizel and Chelyabinsk Basins, the Gusinoye Ozero deposit, Kharanor, Khabarovsk and some Mosbass deposits. 3) Deposits of anthracites of a very low specific resistance: the (KS) method for general and (Gradient PS) Method for detailed prospecting. All the anthracite deposits of the Donbass and of the Gorlovsky Basin be-

long to this group. 4) Deposits of brown slightly-metamorphized coals with a high ash content, coals with a sharply changing degree of metamorphosis, deposits in zones of permafrost, deposits of coals changing from T to A. The GGE (NGK and GK) method for general and detailed prospecting with addition of (TKO) and (gradient PS) methods for detailed prospecting are recommended. The following deposits belong to this group: East-Ural, Nerchugan, Beklemish-evo, and parts of the Donbass, Mosbass and Tom'-Usa region of the Kuzbass. Since previous drilling estimates contained errors up to 50%, the author recommends strict adherence to the rules established ratified and published by the GKZ under the title "The Conditions of Utilization of Electric Core Sampling Data for the Estimation of Prospected Coal Reserves". There are 2 tables.

SOV/5592

Tech. Ed.: A. S. Polosina.

PURPOSE : The book is intended for engineers and technicians dealing with the problems involved in the application of radioactive isotopes and nuclear radiation.

COVERAGE: This collection of 39 articles is Vol. 4 of the Transactions of the All-Union Conference of the Introduction of Radioactive Isotopes and Nuclear Reactions in the National Economy of the USSR. The Conference was called by the Gosudarstvennyy nauchno-tekhnicheskiy komitet Sovet Ministrov SSSR (State Scientific-Technical Committee of the Council of Ministers of the USSR), Academy of Sciences USSR, Gosplan SSSR (State Planning Committee of the Council of Ministers of the USSR), Gosudarstvennyy komitet Soveta Ministrov SSSR po avtomatizatsii i mashinostroyeniyu (State Committee of the Council of Ministers of the USSR for Automation and Machine Building), and the Council of Ministers of the Latvian SSR. The reports summarized in this publication deal with the advantages, prospects, and

Card 2/11

development of radioactive methods used in prospecting, surveying, and mining of ores. Individual reports present the results of the latest scientific research on the development and improvement of the theory, methodology, and technology of radiometric investigations. Application of radioactive methods in the field of engineering geology, hydrology, and the control of ore enrichment processes is analyzed. No personalities are mentioned. There are no references.

"Continuous Provocation Method and the Problem of  
Radical Therapy for Malaria," Prof M. N. Speranskiy,  
1½ pp

"Sov Med" No 3

Describes a new system for treating malaria. Analyzes  
results obtained from 80 cases. Relative success of  
method does not solve the problem of a radical malaria  
therapy, which will probably require synthesis of a  
new chemical preparation with a specific action on  
the reticulo-endothelial phase of the plasmodium.
